insight Hosted

The Hosted version of Insight[®] supports collection owners who want all of the end-user capabilities of Insight, but do not have the necessary server space and systems support to host their collection locally. Insight Hosted is configured with a relational implementation of the VRA Core 3.0 metadata standard, and includes Inscribe data entry software for remote cataloging of your collection over the Internet. Collections of any size can be hosted, and are expandable as collection needs grow. Additionally, Hosted clients can build a network of image content quickly and easily by sharing collections with other *Insight*[®] clients. Hosting fees are billed monthly based upon the number of images in your collection.

summary of features

- Unlimited *Insight*[®] client licenses with pre-configured usernames and passwords
